## **SECTION V**

- 1. The subject matter of claims 1-9 fulfills the requirements of Articles 33(2) and 33(3) PCT. Although the documents cited in the I.S.R. do provide probes which overlap in sequence with those claimed none of the documents suggests the exact primer pairs claimed for use in a PCR HIV-1 detection method. The claims thus encompass novel subject matter because this is the first time a particular combination of primers is suggested. Furthermore the choices made do appear to provide a better detection of HIV infection over those disclosed in the prior art methods (see example 4). As the particular choices of primer result in improved detection, the subject matter of the claims also appears to involve an inventive step.
- 2. However, in contrast to the above, the subject matter of claim 10 neither discloses a particular choice of primer nor any particular sequence. Consequently the said subject matter does not fulfill the requirements of Articles 33(2) or 33(3) PCT because D1-D3 disclose primer pairs which encompass locations within the LTR.

## **SECTION VII**

1. Contrary to the requirements of Rule 5.1(a)(ii) PCT, the relevant background art disclosed in the documents D1-D3 are not mentioned in the description, nor are these documents identified therein.

  - 3. Use of an oligonucleotide according to claim 1 or 2 in a nucleic acid amplification reaction or as a probe for the detection of HIV nucleic acid in a sample.

- 4. Pair of oligonucleotides, for use as a set in the amplification of a target sequence located within the LTR region of the genome of HIV-1, said pair consisting of a first oligonucleotide being 10-50 nucleotides in length and comprising, at least a fragment of 10 nucleotides, of a sequence selected from the group consisting of:
- 5 SEQ ID 1: G GGC GCC ACT GCT AGA GA

SEQ ID 2: G TTC GGG CGC CAC TGC TAG A

SEQ ID 3: CGGGCGCCACTGCTA

and a second oligonucleotide being 10-50 nucleotides in length and comprising, at least a fragment of 10 nucleotides, of a sequence selected from the group consisting of:

10 SEQ ID 4: CTG CTT AAA GCC TCA ATA AA

SEQ ID 5: CTC AAT AAA GCT TGC CTT GA.

SEQ ID 12: GAT GCA TGC TCA ATA AAG CTT GCC TTG AGT

- 5. Pair of oligonucleotides according to claim 3, consisting of

35 provided with a detectable label.

9. Method for the detection of HIV-1 nucleic acid in a sample wherein the sample is subjected to a nucleic acid amplification reaction using a pair of oligonucleotides according to claim 4 and suitable amplification reagents and the presence of any amplified nucleic acid is detected.

5

10. Method according to claim 9, wherein the detection of any amplified nucleic acid is carried out by reacting the sample with an oligonucleotide according to claim 8 under suitable hybridization conditions and detecting the presence of the label in any hybrids formed between the amplified sequence and the probe.

10

- 11. Method according to claim 9, wherein the amplification technique used is a transcription based amplification technique and the first oligonucleotide is provided with a promoter sequence recognized by a DNA dependent RNA polymerase.
- 15 12. Test kit for the detection of HIV-1 in a sample comprising:
  - one or more oligonucleotides according any of claims 1-2,
  - an oligonucleotide comprising a nucleic acid sequence substantially complementary to at least part of the amplified nucleic acid sequence, provided with a detectable label
- 20 suitable amplification reagents.
  - 13. Test kit for the detection of HIV-1 in a sample comprising a pair of oligonucleotide according to claim 4, together with suitable amplification reagents and means for detecting the amplified nucleic acid.

(54) Title: NUCLEIC ACID SEQUENCES THAT CAN BE USED AS PRIMERS AND PROBES IN THE AMPLIFICATION AND DETECTION OF ALL SUBTYPES OF HIV-1

### (57) Abstract

The present invention is related to nucleic acid sequences that can be used in the field of virus diagnostics, more specifically the diagnosis of infections with the AIDS causing Human Immuno-deficiency Virus (HIV). With the present invention nucleotide sequences are provided that can be used as primers and probes in the amplification and detection of HIV-1 nucleic acid. The oligonucleotide sequences provided with the present invention are located in the LTR part of the HIV viral genome. It has been found that, by using the sequences of the present invention in methods for the amplification and detection of nucleic acid a sensitive and specific detection of HIV-1 can be obtained. The benefit of the sequences of the present invention primarily resides in the fact that, with the aid of primers and probes comprising the sequences according to the invention the nucleic acid of all presently known subtypes of HIV-1 can be detected with high accuracy and sensitivity. So far no primer pairs or hybridization probes have been developed that would allow the detection of such a broad range of HIV-1 variants. The oligonucleotide sequences according to the present invention are especially useful in methods for the amplification of nucleic acid.
